

The launch of the Mend the Gap platform pilot with the operators of the Arci Social Cooperative, Lecce, 29th October.

On 29 October, the three facilitators of Mobius Circle, Daniela, Alice e Azzurra held an online session for the introduction of the Mend the Gap platform and the launch of its testing phase.

Remotely connected to the online session were some of the operators of the Arci cooperative, a reality in the context of the city of Lecce, which has long worked in the field of integration and intercultural mediation and provides training courses for women, especially migrants.

The session was attended in particular by the cooperative's educators who had previously taken part in the focus group organised by Mobius Circle for the initial presentation of the project, a meeting that had aimed, through the method of co-creation, to gather opinions and advice for the subsequent development of the platform.

The online session and some initial feedbacks,

During the online session, the Mend the Gap platform was presented live. The various sections of the educational platform were browsed and the resources and tools that have been developed and will be tested with the support of the operators of the Arci cooperative were presented.

However, the session was also an opportunity to get an initial feedback from the connected educators regarding above all the relevance, applicability and format of the educational resources presented.

The participants gave a positive opinion of the platform, confirming its usefulness and emphasising that there is a lack of open and quality educational resources of this kind, especially that take the issue of gender inequality into account. They particularly appreciated the educator's self-assessment tool, as an immediate and effective way to evaluate their awareness about the topic and grow more knowledge on that. But they also liked the topics of the modules and their user-friendly appearance.

The session was concluded by leaving the educators with detailed instructions on how to test the platform on their own in the following days and how to leave their feedback.
